

## **SYSTEM AND METHOD FOR CONTEXT SENSITIVE MOBILE DATA AND SOFTWARE UPDATE**

### **ABSTRACT OF THE DISCLOSURE**

5

Change management for a mobile data system having a mobile client device that shares data with multiple enterprise data sources involves receiving a communication from the mobile client device, wherein the client request is received at an application server and includes metadata that identifies one or more

10 applications installed at the mobile client device, determining if an update package is available for the installed application, and updating the mobile client device and downloading the update package to the mobile client device.
